Semantic model reference document

Please note that the content in this document is proprietary and confidential and has only been provided for the reviewers to gain a comprehensive understanding on the study

Introduction – purpose of this document

- This document is :
  - A **dictionary** that define **79 Classes (some have been omitted)**
  - A navigable **reference** for the metamodel **training**.
  - A **compilation** of **12 meta model fragment diagrams** that show the **Classes** and their **relationships** in the context of significant use cases.
- For each class a 3 steps **path** is indicated to allow a user **to find** where a **class** is managed in Jalapeno.
- The list of **Classes** and **properties** presented in this document is not exhaustive but represent a **best practice** that can be used as a **baseline** to identify variations or extensions that fit specific requirements.

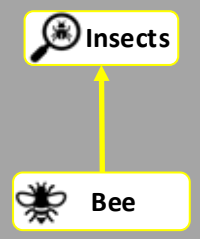
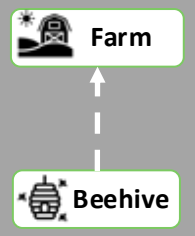
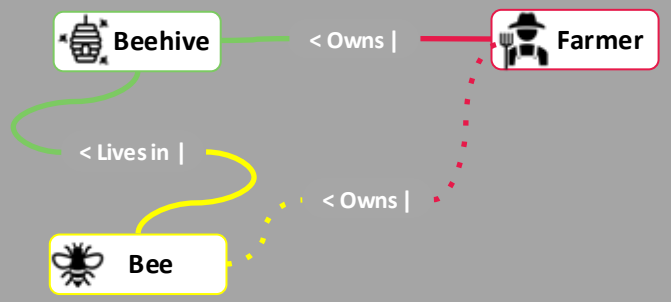
Meta model fragment diagrams – how to read



Bee is **SubClass** of Insects



Bee hive is **Part of** Farm (dashed white arrow)

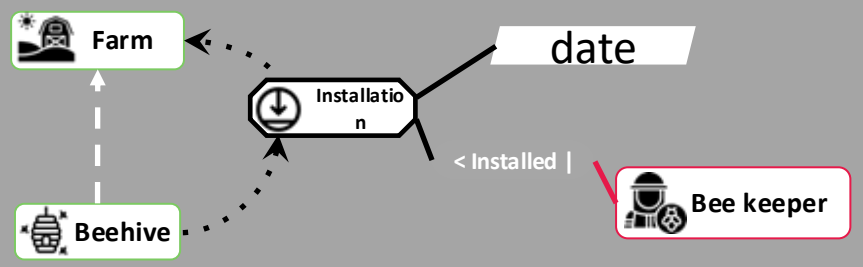


Dotted relationships indicate **alternative** modelling options that, preferably, are mutually exclusive options.

For instance:

Farmer – Owns – Bees can be reported / inferred easily if model include ***Farmer – Owns – Beehive*** and ***Bee – Lives in – Beehive***.

If modelling choice is to **not include** equipment like **Beehives**, **then** an **alternative** modelling convention can be to record directly ***Farmer – Owns- Beehive*.**



Black dotted relationships indicate **statements** that qualify a relationship.

For instance:
Beehive has been
- **installed since** a date, **2015**
- **Installed by** a **Beekeeper**

Instructions – how to read a class slide

Parent Class

White **triangle** indicates **Part of** or **SubClass** relationship

Class **icon**

Class name

Class Belongs to this CELL

Linked to related Cell slide

Color of the **Cell** this class belongs to (see Jalapeno Framework Cells Card)

Definition

*A short **definition** of the class.*

Example

*A short **example** of how the class is instantiated (using a Pizza restaurant theme).*

Attributes

◆Commonly used **attributes** and their types (String, List, Integer…)

Farm

Relationship(s) this class has with other classes.
E.g. Duckling – lives at - Farm

Find this class in Jalapeno in **3** steps

1 Discipline name

2 *Pathway* Pathway

3 *Step* Step in Pathway

TECHNOLOGY

Use cases involving this class, can. Linked to related diagram

ENDS

Ends define the target states that the business will strive to achieve (expressed as Desired Results). They establish “what” the business will do to achieve these states and are inspired by the organisational Vision.

CAPABILITY

CSP:ENDS

Definition

A **Business Capability** is the acquired capacity of an organisation to successfully pursue a business endeavour through a coordinated set of Outcomes.

Example

*"Food preparation management", or "Menu management" are examples of business **Capability** relevant for the restaurant industry domain.*

Attributes

OFFERING

CSP:ENDS

Definition

A packaged combination of **Product(s)**, terms and marketing elements, targeting a market **segment**. An **Offering** is designed to meet needs of a **Segment**, and in doing so, provides benefits to customers and supports a **Value proposition** of the offering entity.

Example

*Magic pizza has developed an **Offering** called "pre-order online", targeted at meeting the growing demand to go online to pre-order meals that can be taken on site.*

Attributes

Step Offerings

PERSONA USERJOURNEY VALUEPROP

| Offering Items > PLACE

| Offering Items > PRICE

< Offered by | PRODUCT FEATURE

| Offering Items > PROMOTION

| Offered in Value Proposition > VALUE PROPOSITION

PLACE

CSP:ENDS

Definition

Place (or distribution). The activities that make the product available to consumers. Can include channels, coverage, assortments, locations, inventory, transportation, logistics.

Example

*"Order from any **Place**" is a feature offered as part of the **Offering** "pre-order online" .*

PRODUCT FAMILY

PRODUCT

CSP:ENDS

Definition

A **Product** is the mean to deliver a **Capability** to an external **Stakeholder** like a customer.

Example

*"Magic Pizza on my phone" and "Table order fast track" are two **Products** of the **Product Family** called "Service delivery products". They combine **Product features** of the **Offering** "pre-order online".*

Attributes

◆label(string)

Business Architecture

Pathway	Products and Services
Step	Products

VALUEPROP

PRODUCT FEATURE

PRODUCT FAMILY

CSP:ENDS

Definition

A **Product family** is a set of **Products** that are grouped by affinity.

Example

*The **Product Family** "Service delivery products" contains the **Products** "Magic Pizza on my phone" and "Table order fast track".*

Attributes

◆label(string)

Business Architecture

Pathway	Products and Services
Step	Products

VALUEPROP

PRODUCT

PRODUCT

PRODUCT FEATURE

CSP:ENDS

Definition

A **Product feature** is one of the distinguishing characteristics of a **Product** or service that helps boost its appeal to potential buyers.

Example

*"Order menu items from table top" is a **Product feature** of the **Product** "Table order fast track".*

Attributes

< Participating Stakeholder |

VALUE STREAM STAGE

SEGMENT

MEANS

Means define the behaviour (expressed as Courses of Action) and constraints (expressed as Directives) relating to endeavours the business will pursue. Means establish “how” the organisation plans to achieve its stated Ends and are elaborated in support of a Mission.

USER JOURNEY

CSP:MEANS

Definition

The **User Journey** is the complete sum of experiences that customers go through when interacting with an organization.

Example

*"On site Pizza ordering journey" describes the **stages** a customer go thru when ordering a pizza on site. Different **Segments** have different **Experiences** of the same **User journey**.*

MOTIVATION

Defines the drivers that motivate the business to achieve its ENDS.

BENEFIT

CSP:MOTIVATION

Definition

A positive impact experienced by a party resulting from an interaction/transaction with another party or entity.

Example

*"Gain time between order and eating" is a **Benefit** that results from the **Need** "order on the way to restaurant" that is addressed by a **Value proposition** and its **Offering**.*

< Scenario Need | SCENARIO

PAINPOINT

CSP:MOTIVATION

Definition

A specific issue or frustration experienced within the context of a business's operation, as perceived by many perspectives, e.g. customer, process, **capability**, lack of skills, which prevents a business from achieving its goals or operating effectively.

Example

*"Not having warnings when running out of ingredients" is a **Pain point** that affects **Business Capability** "Menu management". It is mitigated by **Business Outcome** "one menu across all systems".*

| Scenario of ValueProposition > VALUE PROPOSITION

| Scenario Need > NEED

GOAL

Goals amplify a corporate Vision — that is, they indicate what must be satisfied on a continuing basis to effectively attain the Vision. A Goal should be attainable and should be specifically oriented to a single aspect of the business problem.

GOAL

CSP:GOAL

Definition

A **Goal** is a statement about a desired state or condition of the enterprise to be brought about or sustained through appropriate **Courses of Action**.

Example

*"Expand Menu Variety" is a **Goal**.*

*"Offer Daily Specials" is **not a Goal** but a means to "Expand menu variety" (it does not exist for its own sake).*

Step	Set Goals

STRATEGY CONTINUOUS

| Substantiated by Objectives > OBJECTIVE

| Directed by Policy or Legislation > LEGISLATION

| Directed by Policy or Legislation > POLICY

| Sustained by Strategy > STRATEGY

| Goal Milestone > MILESTONE

STRATEGY

Strategies are mechanisms for planning business behaviour, Courses of Action by which Desired Results will be achieved.

STRATEGY

CSP:STRATEGY

Definition

A **Strategy** represents an essential **Course of Action** that will be sustained in pursuit of a **Goal**.

Example

*"Offer seasonal menu" is a **Strategy** that sustains the **Goal** "Establish regular customers".*

Attributes

◆label(string)

Strategic Planning

Pathway	Strategic Planning
Step	Set Strategies

STRATEGY CONTINUOUS

< Sustained by Strategy | GOAL

< Governs Strategy | LEGISLATION

| Implemented by Tactic > INITIATIVE

POLICY

Policies establish business definitions that articulate the business rationale.

LEGISLATION

CSP:POLICY

Definition

Legislation is legally binding Policy that has been mandated by some governing body.

Example

The "Food Act 26" ensures that food for sale is safe and suitable for human consumption.

Attributes

◆label(string) ◆Avatar Image(string) ◆remark(string) ◆Start Date(date) ◆End Date(date)

Strategic Planning

Pathway Strategic Planning

Step Set Legislation and Policy

STRATEGY

< Directed by Policy or Legislation | GOAL

| Governs Strategy > STRATEGY

POLICY

CSP:POLICY

Definition

A **Policy** is a non-actionable directive whose purpose is to govern or guide **Courses of Action**.

Example

*"Safety in the kitchen" is **Policy** number one at Magic Pizza.*

Attributes

◆Avatar Image(string) ◆label(string) ◆remark(string) ◆Start Date(date) ◆End Date(date)

STRATEGY

| Elaborated by Control >

METRIC

< Directed by Policy or Legislation |

GOAL

OBJECTIVE CELL

Objectives quantify Goals - that is, they provide the basis for metrics to determine whether the Goal is being achieved.

VALUEDIAL

BUSINESS DRIVER

CSP:OBJECTIVECELL

Definition

Business drivers are the key inputs and activities that contribute to the overall operational and financial value of a business.

Example

*"Optimize operations" is a **Business driver** that contributes to the **Value dial** "Decrease cost" and that drives **Business outcomes** like "order online on the way to restaurant".*

Attributes

◆label(string)

Strategic Planning

Pathway Performance Indicators

Step Objective Value Drivers

CONTINUOUS INNOVATION

< Driven By | BUSINESS OUTCOME

< Clarified by Business Driver | INITIATIVE

BUSINESS OUTCOME

CSP:OBJECTIVECELL

Definition

Business Outcome represents a state that is to be achieved. Its elicitation in the shape of **innovative ideas** is motivated by **Business drivers** that contribute to the overall enterprise value.

Example

*The **Business outcome** "Order online on way to restaurant" is motivated by **Business driver** "Optimize the operations", i.e. it is a desired outcome that would improve operations efficiency.*

VALUEDIAL

CSP:OBJECTIVECELL

Definition

Value dials can be defined as the nodes of a “value driver tree” which plots all the things that contribute to business value creation (a “value driver tree” is a chain of consequences).

Example

*”Decrease Expense” and “Increase Profit” **Value dials** are aggregated into the higher level **Value dial** “Increase operating profit” .*

Attributes

◆label(string)

Strategic Planning

Pathway Performance Indicators

Step Objective Value Drivers

CONTINUOUS INNOVATION

BUSINESS DRIVER

TACTIC

Tactics are courses of action that are made operational. Tactics are not of themselves strategic, but support business Strategies.

INITIATIVE

CSP:TACTIC

Definition

A planned series of events or programmes intended to bring about some desired outcome.

Example

*"Improve online ordering to include option for online ordered meal to be taken on site" is an **Initiative** that supports the company strategic **Objective** to cater for busy young adults.*

Attributes

MILESTONE

CSP:TACTIC

Definition

A project **Milestone** is a task of zero duration that shows an important achievement in an **Initiative** or a **Project**.

Example

*"Celebrate first 50 regularly returning young adults after 6 months" is a **Milestone** that marks an achievement toward the the strategic **Goal** of "Becoming preferred pizza provider to young adults".*

Attributes

CONTROL

Controls govern, guide or influence business behaviour, in support of business Policy. Business Rules provide specific, actionable governance or guidance to implement business Policies.

METRIC

CSP:CONTROL

Definition

Metrics can be defined to track the realisation of **Objectives**, or the performance of **Value stream**.

Example

"Performance of stage completion" ***Metric*** *tracks performance of* ***Value stream stage*** *completion on a scale ranging from poor (30 min): 0% to good (10 min) : 100%.*

REQUIREMENT

CSP:CONTROL

Definition

A **Requirement** elaborates a directive of a business **Stakeholder** toward the enablement of a business function. **Requirements** are stated as a **User story**, identifying the Stakeholder (**As-A**), the directive (**I-Want**) and the motivation (**So-That**).

Example

As a *Guest* ***I Want*** *"To make orders on my mobile on way to restaurant"* ***So that*** *"I gain time".*
